

TOPIC: Protected Distribution System (PDS) and Conduit Installation Esthetic Standards

ISSUE:

- Determine reasonable esthetic standards for conduits and PDS installed by EDS.

DECISION:

- Installation of all interior and exterior (where they are visible from sidewalks, streets or adjacent buildings) exposed conduits shall be installed to match existing conduits and blend into the existing surroundings to the maximum extent possible, including (but not limited to) painting conduits in exposed areas, unless the Government decides against the painting on a case-by-case basis. Most interior conduits shall be installed above the ceiling tiles unless otherwise specified by the Government.
- PDS conduit shall be installed below the ceiling unless otherwise specified by the Government. Where new PDS conduit is installed above the ceiling tiles, the Government will provide see-through ceiling tiles.
